FAUTIN, DAPHNE GAIL, DOUGLAS J. FUTUYMA, and FRANCES C. JAMES, eds.
1995. **Annual Review of Ecology and Systematics. Volume 26.**
(ISBN 0-8243-426-3, hbk). Annual Reviews Inc., 4139 El Camino
Way, P.O. Box 10139, Palo Alto, CA 94303-0139. \$47.00, 757 pp.

The first eleven chapters of Volume 26 are devoted to a special section on Sustainability Issues. From the Preface: "Several chapters were written by authors invited to discuss sustainability from the perspectives of disciplines not typically included in *ARES*. Topics and authors for the section were selected in part to demonstrate some of the ways in which this word is employed—a diversity that extends to the underlying assumptions and principles used in discussions of and proposals for sustainability. This section will have achieved one of its aims if readers come away recognizing some of these differences and the need to be explicit in their own usage and about the underpinnings of their positions." The remaining 19 chapters cover various aspects of ecology and systematics. Examples include Women in Systematics, Molecular evidence for Natural Selection, The Role of Nitrogen in the Response of Forest Net Primary Production to Elevated Atmospheric Carbon Dioxide, Architectural Effects and the Interpretation of Patterns of Fruit and Seed Development, and Plant-Vertebrate Seed Dispersal Systems in the Mediterranean: Ecological, Evolutionary, and Historical Determinants. Indexes include: Subject; Cumulative Index of Contributing Authors, Volumes 22–26; and Cumulative Index of Chapter Titles, Volumes 22–26.
